

# Supply & Demand Technical FatFace

## Flag Limit Character Strategy

[www.RandomCycleMalaysia.com](http://www.RandomCycleMalaysia.com) 1 | Page

Pengarang : Zally Ismail

## Introduction

Bismillah with the name of Allah the Most Compassionate, Most Merciful, Peace

First of all I would like to thank who are willing to get E Book Random Cycle Second Version of me and I am very pleased that Mr / Mrs willing to study all this.

This ebook is 100% my own writing in English to facilitate the understanding of host-madam all.

This ebook is the second ebook **Random Cycle Malaysia** which describes the technique of Supply and Demand of skill and how we all beranalisa using skill Supply and Demand greater focus on Flag Limit.

Random Cycle In Malaysia it is clear that this technique over the "Trading Price" using Japanese candlesticks as the sole indicator for us beranalisa.

Thank God for the first time in 2019 I was successful write / compose this book as a reference and make it easier for traders to understand the strategy of using Flag limit for making a decision in your trading.

I want to emphasize here is that Forex trading is most at risk and to use this knowledge to increase understanding science master gentlemen should attempt to understand what is written in this difficult so take this as only filling in additional knowledge in your technical strategy.

## Muka Surat Ebook Random Cycle Malaysia V2

### **Tajuk Utama** **M/S**

Pendahuluan..... 2

### **CHAPTER 1 ( ASAS TEKNIKAL )**

Mental Forex Malaysia..... 6 - 9

Asas Pergerakan Pasaran..... 10 - 16

Swap Area..... 17 - 18

Support/Resistance Flip..... 19

Breakout..... 20 - 24

Significant Support/Resistance..... 25 - 26

Supply & Demand..... 27 - 30

Trend di dalam Supply & Demand..... 31 - 33

Hidden Base..... 34 - 36

Price Cap/Cap On Price..... 37 - 39

Swap Base ( Supply & Demand )..... 40 - 43

### **CHAPTER 2 ( PAST/HISTORY )**

Engulf..... 45

Relate Engulf VS Failure To Return..... 46 - 48

Flag Limit ( ASAS )..... 49

FTR VS Flag Limit..... 50 - 52

Swap Flag Limit..... 53

### **CHAPTER 2 ( PRESENT )**

Compression..... 55 - 64

3 Drive/ 3 Tap..... 65 - 67

Break Stop Zone (BSZ)..... 68 - 72

## CHAPTER 4 ( REACTION )

Quasimodo/Over & Under.....	74 - 77
The Diamond ( Fakeout ).....	78 - 79
The Can-Can.....	80 - 81

## CHAPTER 5 ( STRATEGY )

Decision Point.....	83
...Mouth OF Flag.....	83 - 84
...Engulfing.....	85 - 86
...Maximum Pain Level.....	87 - 88

## Golden Setup Flag Limit Character

Continuation Flag Limit.....	89 - 97
RS/SR of Flag Limit.....	98 - 108
Swap Changing OF Flag Limit.....	109 - 116
Swipe Flag ( Spike Base ).....	117 - 118
Abbreviation.....	119 - 120
Penutup.....	121

"Pastikan Kita Belajar selagi ilmu itu datang, dan pastikan kita lakukan selagi ada peluang"

- No master in forex

No Master in the Forex, meaning in forex nobody fabulous nobody less as a retail trader we are the same, we are dealing with ourselves in the Forex market where we only have to deal with emotions, control and financial management and our own targets, we are afraid of another individual privileges of its analysis and others expressed confidence buy and sell then we become weak and insecure position analysis and we do buy and sell.

- Goals / Targets | Scalping | intraday | position

This goal means we have to find compatibility ways of trading on our own, no need to find a suitable person or imitate other individuals, the average experience of seeing many traders use one trading account to do all kinds of traders above, it has put the risk is too great to account, and some of them did each entry hoping to swing the existing position and end position to do end up with a stop loss at upon margin call (MC).

- **High Risk accounts vs. Low Risk accounts**

High Risk means the person making entry account with lots of large power margin account caused him to become very small where it will end up with multiple benefits at upon if stop loss, cut the margin account will be lower and the margin call.

Likewise with Low Risk trading account to create a safer ensure it is able to survive if the individual's position on SL and have another opportunity to control and perform the next entry to the lot size is still the same.

So what is the best of both as aware if the control account emotional necessarily use Low Risk better but here is the relevant risk and ratio where both are either dependent on the extent to which an individual is willing to accept the loss, if high risk traders are able to receive losses means the probability he will gain everything is doubled from the respective trading system

- Forex Time (Compatibility)

Compatibility here means a time to make trades, as well aware of the forex market the world focused the market on that morning is market japan, china, AUD and NZD, while the evening is the London market for the euro and GBP and night is New York and Canada, so should we there will be a time that is more compatible with ourselves, some traders are able to consistently open usually a time when London was a lot of news euro and gbp.

- Forex Benefit

Forex benefit means, in forex we not just as a trader, we can also be IB (introducer Broker) Sub IB and the like, where we covering Affiliate program run by many brokers to promote the existing benefit disesebuah broker.ia an opportunity and we also do not necessarily have to do marketing, we can register our own trading account in our own Affiliate link and we will get a rebate with what we are trading every day.

- principle

Do not jump technique while mindset has not changed. Forex is a probability.

This principle is very important if you do not what you read in the tips of mental forex Malaysia is you do not need to exchange techniques because you still do not achieve compatibility, and if you change your technique also remained at the same level as you are still trading with emotional and are not looking for your own identity for me reiterate berdagang. Sebagai example of a good trading system (Engineering) is a minimal risk that it's safer than putting too great a risk to the position taken.

- The extent or duration of your trade, useless or no change to the better

Means for where you are trading for example you are already a trader for 2 years, experience of 2 years it is still worth it, you keep mendepo and loss rates exceeding 50% of capital to use it is a loss, so in this situation if still remained at a level you need to find a mentor long where you have to find a mistake in your trading by finding where gone wrong before, it

does not mean you have to be like a mentor, he is just looking for errors in the way you trade before.

- courageous

Brave here means you dare with every trade you, after you do the analysis you do not need or care about how trading other people if you need to just find out what not to fear or worry about your analysis wrong after seeing the analysis by other individuals, this should be changed if you are nervous and able to analyze people and change the selection by imitating someone else, so you're not brave and confident in your own analysis.

- Risk

The risk is closely related to the financial management of your trading where you trade by placing a Stop Loss (ie the rate of loss you are willing to losses after opening buy or sell position) is the probability forex remember

- idea

Idea intends to open a position you have an idea of the practical and the training you did before, the idea of selecting a pair, the idea to find a position SL (stop loss) and TP (take profit)

- creativity

Creativity is your understanding of the drawing or chart that moves with the times. Creativity for example if you use a naked chart as looking position is you buy and sell your painting labeling and use of existing tools such as trendline, horizontal line, channel and so on to measure the zones entry.

What do you See? Myvi necessarily a car, but rather we want to tell you about the car myvi here.

Remember when we first learned to drive a bit, we learn to enter the gear, press the paddle oil, usually used to mean learning to drive a manual car and when the training is still stutter, when entering the gear we still see the gear as well as oil presses and break still worried and finally now have become incompatible want to enter the gear I need not see the gear everything to be automatic for us to easily and confidently, there is the start of the subconscious mind we turned to scar practical exercises day after day it happened familiar with what things do , as well as forex, forex also need training and time, it is not as easy as today to learn today reached kejayaan.Banyakkan to continue successful training.

## Basic market driven market

In essence we know that the market is driven to move from balance to strike a balance, in turn, also of HH (Highest Quality) find LL (Lowest Low) and vice versa from LL (Lowest Low) find HH (Highest Quality).

How the market moves markets?

Stir the market due to the occurrence of Supply and Demand, where the clash between supply and demand at a given price is the price to move higher and lower.

Who is moving the market market?

Of course the mengerakkannya is institutional or bank, Big traders, hedge funds and so on, as a retail trader we are not able to move the market price even 1pips.

Identify trends based on market movements

As we all know that the trend in the market, namely the market has 3

1. Trend UP - The price moves up or considering higher prices and better known as (Bullish)

2. Trend Down - Prices move down or to lower the price and cost, better known as (Bearish)

3. Trends Sidway - Prices move in horizontal, there is no way for this move reflects a calmer market waiting Breakout.

The diagram above shows the movement of market structure in the upward namely Bullish mean the price moves of LL (Lowest Low) to HH (Highest Quality) and also the movement of the market structure in the decline of a Bearish means the price moves of HH (Highest Quality) to LL (Lowest Low). to determine trends through breakout (BO) please refer to the next picture.

The diagram below shows how we identified the upward trend of prices will move (impulsive) and the occurrence retracement / correction and so the price will breakout SR means prices will continue to create new Highest High (HH)

This diagram shows how we identify trends to lose some of the price will move (impulsive) and the occurrence retracement / correction and so the price will breakout SR means prices will continue to create new Lowest Low (LL).

Next please refer to the picture of how we want to mark or label the chart above to determine the current market structure.

### Trend exchange know how to use the Basic sturuktur

1. Refer to Figure in the structure No *confirmation* there is only the start signal or the signal

The first shows a trend change occurred so to move up to the price decline should be *Breakout* HL (Highest Low) while the previous downward trend to the upside price breakout should also mean LH before the start signal was showing a trend change will occur.

Signal Switching from uptrend to downtrend

Signal Switching from a downtrend to an uptrend

Support and Resistance refers to technical, it will show the highest price of the Resistance and the lowest price that support and essentially as a trader you will choose buy at support and sell at Resistance. Simbol that we found is that S & R, SNR or SR, it is the same, Generally many traders who already understand what the SR and it refers to the price at which the price ceiling and floor prices, most traders use the SR as a technique common in forex trading.

The figure below shows the market price moves upward market price is making new show resistance during the rise and you have to be careful on the resistance in the larger time frame, the price is likely to bounce back if the price gets to that area.

The figure below shows the price movement or market where prices are declining market is showing a price move to create new support, when you need to be careful to support those at a larger time frame that can make the price rebound.

## Swap Area / Zone

Swap Zone which is where the Resistance who were then the price back to test the breakout area and prices bounced back above the mean zone known as the trend of the exchange zone.

This picture refers to the area that causes Swap Line

Breakout (BO) If we choose to host gentlemen entry should refer to the supply and demand for this area.

technical

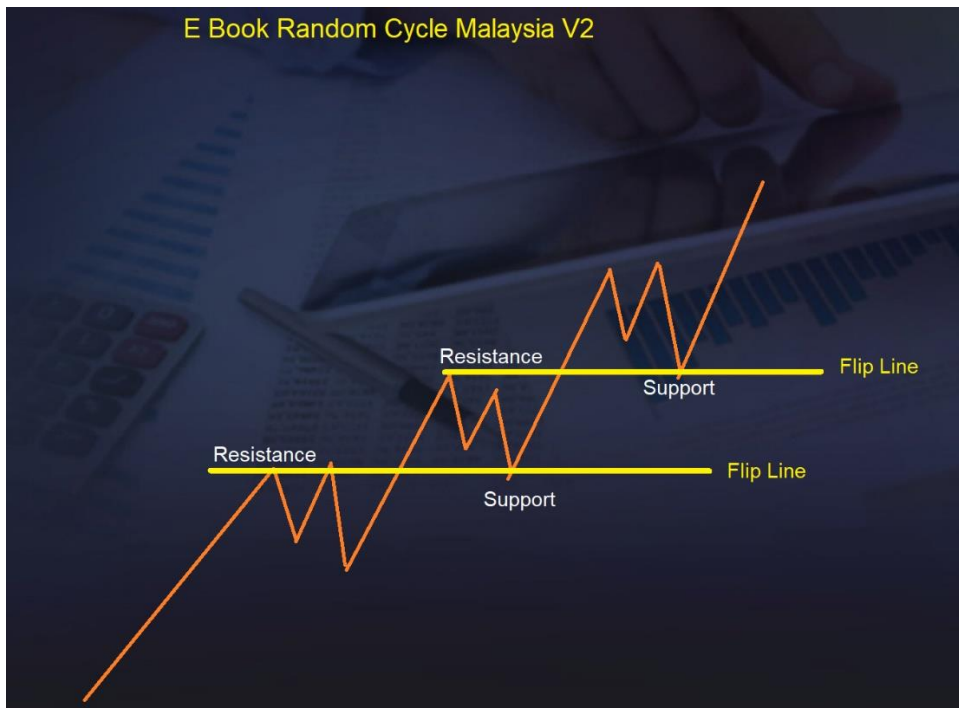

1. Support (Previous Low)
2. Low Previous Line Breakout
3. Potential Retest line

The story that we see in the above situations are when prices rose from LL (Lowest Low) to HH (Highest Quality) and when the price is HH peak price down so successful close below the support at upon Highest Low Previous (No. 1) and when the price by HL close below the previous successful we will mark a line and label it as a swap line that the potential for the area to be tested again.

## Support And Resistance Flip (flip / Switch)

For SR / RS flip original syllabus refers Random Flip Cycle is intended to reverse the trend or shift in the trend also has an overlap between support and resistance at upon resistance to support. Rujuk figure below cited in a chart where the fold line (area / area) retested.

## Breakout (BO)

Breakout is divided into three

- i) Break and Retest
- ii) Break Through
- iii) False Breakout

### Break & Retest

- Breakout and retest mean the price make a breakout on the SR price will retest the area or cause a breakout, breakout you bolehla make a good position in the area that had happened breakout and traders breakout also waiting for a good opportunity to Opening position entry to the areas already breakout.

When we refer to this image will be the same as with the flip and swap we have seen in the preceding pages, that picture of the actual forex nearly equal to an understanding and a different name.

#### break Through

Break Through mean price breakout without retesting areas already in a breakout, prices will continue to jump or climb without going back to the area that has been a breakout, the trader breakout usually will put the stop Oder (Sell Stop / Buy Stop) area of resistance and support, things break through this often happens when there is big news.

Market situation clearly shows that successful breakout above this price without retesting Area Area (Support) that have been successful breakout. Untuk bergini markets usually occur when news of the ataupon data that suddenly occur including .State market panic like this usually successful breakout trader obtaining profit / good profit.

## False Breakout (FO)

False breakout mean manipulation of prices for Support and Resistance trader where the price has been manipulated to create false break area SR then the price back to the barn or the area which goes sideways and breakout of the SR to the contrary herein trap or fraud occurs causing trader breakout will float back or margin if they do not call this place a stop loss because breakout traders will usually put the pending order stop buy or sell at the SR. Banyak way for us to learn about the false breakout usually be measured or analyzed by using SNR, Chart pattern.

Examples of situations that occur in price in the range Triangle, so the situation fakeout / false breakout / fakey and so this is very detrimental for breakout traders because of manipulation in the market.

## Significant Support Resistance (SSR)

SSR is the area where the force of the set price in the price line that became the focus of IT (the Bank) do order. Typically this zone SSR always bounce when price is at that price. For this title will be explained in more detail how to create or make an order on the SSR area.

The figure below is an example to explain what it is significant support and resistance

The set price between support and resistance into a single line at upon Area resulted in strong price reversal / pullback in the price.

This picture shows a student trying to do a position RCM order on the SSR.

## Supply and Demand

### About Basic Introduction What is Supply and Demand.

The concept of supply and demand is widespread in the world it covers included in routine life.

Supply is the supply and demand is demand.

Term supply and demand, or in supply and demand is a term that is very common in the world economy. As we know the law of supply and demand is an old law that has been known since ancient times. Many individuals do not realize that the law of supply and demand strongly influences the movement of prices in the market. This law could be applied in various forms of market, both the commodities market, stock market and foreign exchange trading market (FOREX)

In this article we will discuss about the law of supply and demand, as well as its application in modern markets, especially foreign exchange market or forex trading. In forex laws of supply and demand plays an important role in price movements. Unfortunately Many small traders have little regard for Supply and Demand.

Before entering CHAPTER law of supply and demand, should we need to know what the law of supply and demand. According to Wikipedia, the law of supply and demand if I translate as follows:

1. If demand increases and supply remains, then the price will reach a balance (equilibrium) is higher, the higher the quantity followed.
2. If demand decreases and supply remains, then the price will reach a balance (equilibrium) lower, followed by the lower quantities.
3. If demand increases and supply remains, then the price will reach a balance (equilibrium) lower, followed by the higher quantities.
4. If demand decreases and supply remains, then the price will reach a balance (equilibrium) is higher, followed by the lower quantities.

Guided by the law of supply and demand on the course we're not surprised, because this has been taught since school. But you may not know is how to apply the modern market significantly, especially in the forex market. If we take the **essence of the law above, it can be concluded that prices rise when demand exceeds supply (Law no 1 & 4) and prices fall when supply exceeds demand (Law no 2 & 3)** , Before we get into the chart analysis, we first Identity, what is important in the law of demand and supply on.

- offer
- demand
- equilibrium price
- quantity

If we analyze one by one, the first of the total supply. As a retail trader we will not know exactly what the total supply (sell) that occur in the market, as well as the total demand (buy) that occur in the market as a whole. If we know how easy it is to become a trader. The same goes for quantity, we do not know what the overall quantity of currency that we trade. In contrast to the traditional market, for example rice trade. News shows that the supply of rice declined because many farmers fail to produce sufficient quantities of rice that will certainly make the price soared, as demand remains or existing or draft supply and reduced.

Based on the above example the agricultural situation, we were able to analyze the quantity of rice will be reduced, in contrast to forex, we can not analyze the quantity. The only data that we use is the equilibrium price, and the reality of rising prices or falling prices. Citing the case of a balance, as we understand the law of supply and demand, the price moves from one equilibrium to the other balance. The balance of supply and demand mean enough to each other, so there is no increase or decrease in price. Consider the example of this next chart.

Chart pair USD / CHF a balance in the area above the marked box blue and red. Although the balance was not the case in a long time, but nevertheless there is a balance in the area of price (equilibrium). From the blue box under the price moves up to the next blue, it indicates that prices are moving from one equilibrium to another equilibrium price.

Based on the law of supply and demand which we have discussed earlier, the price will go up when demand exceeds supply. From the example chart diataskita can assume that the up move from the area under the blue box to the blue box on top of it because demand exceeds supply. as well as the rise of price movements on the blue box as demand exceeds supply. In contrast to the red box, red box there is a balance in prices followed a downward price move. Downward movement due to supply exceeding demand.

With evidence of price balance area (equilibrium) and the movement before, we get info about the difference between supply and demand forces in the area. It can be utilized to gain profit in forex market trading. As an example of the move towards price red box blue box. As we have discussed before, in the blue box demand exceeds supply. Thus when the price gets to that area again we can assume baahwa price will turn up as shown in the chart. When prices reach the red box area we can also assume the price will turn back down as shown in the chart.

## Bid and Ask

In the transaction, the purchase price and the selling price of a currency is expressed in the concept of the bid / ask or bid / offer. Bid is a price at which traders are willing to buy, and ask or offer is a price at which traders are willing to sell (if viewed from the standpoint of our own, then the bid is the position we have to buy, and ask or offer is a position for us to sell).

Ask the same basic demand of the Bid is supply

Order When we do business with us is buying the Order Buy Ask including stop or limit buy. Similarly Bid when we sell, buy stop or limit buy order then we are in a Bid price. Thus the difference Bid and Ask is spread. Broker Spreads This is food that we use.

## Spread

The spread is the difference between Bid and Ask. Selalunya when we appeared a large spread this volatile market means that the market is not in line or out of balance, the liquidity reduced or many order currently no order directly ataupun often time news, trader trader have taken advantage ataupun etc. , Spread this small market means high liquidity of retail traders dealing at that time ataupun low volatile.

## Definition Trends in Supply & Demand

Supply and Demand

In the market, Supply refers to the high price for sale by merchants, traders should look for a high price (high) for sale, so how to find the area of supply (supply) ?, diagram below shows some examples of price or supply area for sale by traders.

Figure 1 and 2 shows when prices reach areas Supply and what happens if prices reach the area of supply, prices continue to drop.

Figure 1

Figure 2

## Continuation VS Reversal

### Continuation

RBR (Base Rally Rally)

DBD (Base Drop Drop)

### Reversal

RBD (Rally Base Drop)

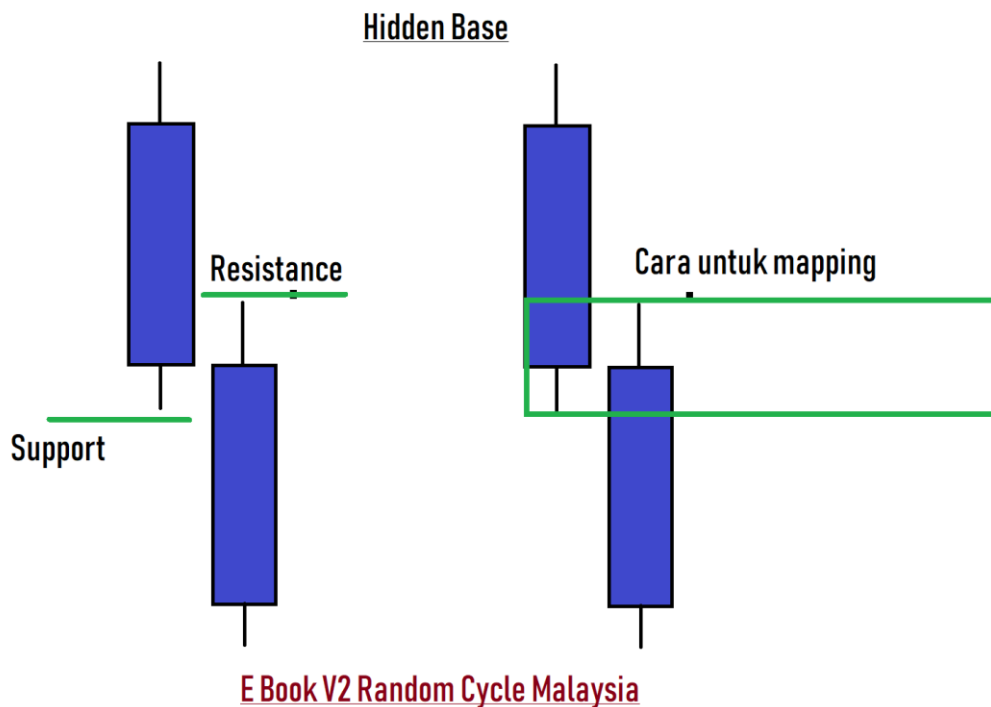

DBR (Drop Base Rally)

## Hidden Base (Base hidden)

This picture shows the Yellow Box is the way we label hidden hidden base where the base is usually accepted in the larger TimeFrame while the base will look better on a larger timeframe kecil. contoh picture above we will make sure the label is actually in the High and Low Resistance and support in The TF.

The above picture shows Kite between our mapping Bearish candle with blue colored box in TimeFrame H1 (1 hour)

Next we switch to a smaller timeframe, we see here on TF M30 (30 Minutes) and the result is a master-name will see the Base clearer.

## Caps On Price / Price cap

Caps on the definition of price is the highest price and the lowest price in the market.

Price cap is the reversal of Rally Base Drop (RBD) and Drop Base Rally What is

Rally Base Drop (RBD)

RBD is where the price rally (Ascending) then make Base (equilibrium price) and Drop (diving), see example image below.

Price Cap familiar with Reversal at upon HH, LL, HL, and LH which each vertices reversal is called price cap

Examples of situations in reaction to the price cap price

What happens after the Demand Already engulf then return the original price and then plunge Cap area. In this situation the role of PA (Price Action) is very important to determine the market direction.

The figure shows that when the supply price successful breakout and then back across the DBR (Drop Base Rally) important base (price cap) and so the price back Bullish proceed as shown above.

Example Entry in the Price cap

### Swap Base (In the Supply & Demand)

The figure refers try to look what the swap? The swap means to exchange or switch where from one trend to another trend at upon if sir-ma'am comprehend the purpose of exchanging herein is of a driven Rally Base Rally (RBR) end of the base Drop Base Drop successful off course RBR is so significant is swap Base of DBD RBR would stop earlier.

Swap Base also is important as a Decision We swap in which the first base occurs Being Drawn blue kita.Kotak important base to first base is the swap occurs when a trend change.

Blue boxes represent Base Base to increase Rally Rally, RBR is trying to see how successful shut down new travel trend by DBD Base Drop Drop the new movement is successful engulfed red box base DBD.maka new journey begins.

When travel Bullish Bullish price moves is called Rally Rally Base so there was no way to stop RBR when up trend continues.

This picture describes the new course will start but how we identify that this course will continue until the end?

## engulf

What is engulfing? Engulf is synonymous with breakout but is more of a breakout engulf and fill the void between FTR, was also named void space between FTR and FTR, how is that? Tough kid with ayat.baik described in this book explained how we would engulf engulf it and is very important to determine the direction of market prices by candlesticks that we use.

### Relationship Failure To Return (FTR) & Engulfed

What is FTR (Failure To Return)

FTR (Failure To Return) is the interaction of the SR where when prices reach the area will penetrate the price SR SR is then when prices return it back and Breakout failed to supply the demand ataupun thence proceed.

1.Previous Support

2.Engulfed line Support

This image shows an example of the characteristics of No. 1 Engulfed we need to get the support before, and the second we will ensure that no two tersebut.engulfed engulfed line support is different targeted targeted the stop price on demand Area ataupun Supply.mungkin sir-ma'am cited by me do not understand this sentence, we explain in the next picture.

There are still the same situation 1 price successful close under 1 and 2 is engulfed previous low, and no 3 is a FTR (Failure to Return for failing close or breakout Previous HH (Highest Quality) and No. 3 also successful close previous low (No 2) ,

FTR structure shows in more detail what it called a space between FTR and FTR FTR .If we see between A, B FTR, FTR C, between FTR red box is a space that is called the void between FTR and when the price of FTR 1 we see to left (look to the left), which engulfed successful FTR C price means the price will complete the look for the FTR B, and if the price drops again and engulf successful FTR B, the price movements are still looking for the next FTR FTR which is A.

A ride on the FTR as the TP or looking for opportunities at upon Buy Sell is in accordance with space / emptiness with reference to engulf the FTR marked.

Failure to return the best is accepted as in the diagram on the no 3 managed to close below the support Major (No. 1), what is it Major? Major means more than 1 support on the SNR (Support and Resistance)

1. Major Support
2. Engulfed
3. FTR (Failure To Return)

## Flag Limit (Basic)

Flag Limit (FL) is one of the base where we can see the price which one saw action in the area of FL, how to view the action? Here we see the PA intends to engulf the area FL whether or not. FL is to determine the extent to which the movement direction of the market it is important for traders who use technical supply and demand. Are FL is also a region Entry? Yes FL can also be used as the entry for FTB (First time back to the area but FL FL is very complicated if we are guided by one time frame sahaja. sebagai example we see the price in H1 time frame already engulf demand and we decided to sell but so far where we have to look to the smaller Time Frame to make good decisions.

Limit Flag is FTR (Failure to return) but not all flag FTR is a limit, how does that mean? Well here we describe it easier to limit Flag Faham. Kita check out what features are necessary to ensure that there is the Limit Flag.

1. Barrier / SR
2. Base parallel to the Barrier
3. FTB (First Time Back) it is important to confirm FL

What's the difference with FTR (Not Flag Limit)

We refer to the diagram above what the differences A, B and C refer to the image above .Our most important to Limit Flag is in line with the applicable Base Support ataupun Resistance / Barrier.  
The second is that FTB First Time Back to Limit Flag confirm there is and if we see pictures A and B have the characteristics of the then where Flag Limit (Important Base  
) and C is in fact not Limit Flag.

SR (Support / Resistance) / Barrier parallel to Base

This picture when prices go back and touch the base, means the area has become the Limit Flag.

Examples Figure 1

Example Figure 2

Examples 1 and 2 where the reaction occurs FTB (First Time Back) on the base that we label as flag limit.

## Flag Swap Limit (Basic)

Flag Limit swap is the exchange of Flag A flag that we see in the image below was Flag A engulf base from uptrend to downtrend then automatically becomes Flag Flag B Limit FTB does not need to confirm the base area is Flag Limit. Flag Swap This limit will be detailed further in the next title.

# Present/ Approach

Tajuk ini menerangkan bagaimana Price Action yang berlaku dan tajuk ini sangat penting kerana Golden setup berlaku merujuk Present Price ke Past/History

## compression

Compression ataupun price compaction familiar if you are already using the Technical Supply and Demand as technical in your trading.

This compression in RCM is explained to ataupun retracement price correction to History / Past.

In essence Compression is shaping up as the price of compressed to a zone that is the point here of price manipulation was done by IT (institutional) to buy or sell in the zone of supply and demand, it can also occur as a trap to the trader with the existence CPLQ of compression continue momentum find another liquidity, In this situation the trader must use risk as possible and make sure that your trading to a zone well.

The diagram above shows an example of compression / compaction price moves towards the zone Limit Flag.

Compression is divided into 3

1.CP PAZ (Compression Price Action Zone)

Compression 2.Stacked

3. In out Compression

So maybe there's a first look at this type of Compression  
,do not worry he is the same character is looking for liquidity

Is this compression everything happens well on the market, not at all forex trading is high risk  
and various manipulations are highly probable in pasaran.Compression also called Compression  
Compression Liquidity or Failed (CPF)

## 1. In Out Compression

In Out Compression means each of which will go out again, the example image above and below the price rise is seeking liquidity when prices will return to the base.

### Stacked Compression

Compression Stacked shows when bulls duplication of support and resistance apply it together with an increase in the focus of the fold line where the resistance becomes support price increase with stacked .Sample compression can refer to the image below.

Compression Price Action Zone (PAZ CP)

CP PAZ is the same as we learned earlier, namely space between FTR and FTR

When the increase is similar to the Stacked CP and drop fill any void between FTR and FTR's why it is called CP PAZ, when we call only concerned PAZ (Price Action Zone) is very closely related to engulf and FTR.

## Compression flag

Next Flag is also one of the forms we find opportunities to buy and sell, usually Flag will be shaped Compression means the price will fluctuate within compressed. let's look at an example

Both images are news EUR in July 2017 see price flag into the orange zone of the sign is the SR already inBREAK and bulls (Rally) Price significant mean quality Demand in the zone labeled, are what price reaction when prices reach the zone The.

See What happens after Price reached the marked area, when the price reached the Decision Point which marked the important base price continued to rally.

#### 1. CP Flag (Type 1) to the SR or RS Flip

Example Compression Region SR / RS Flip

## 2. Flag Cp (Type 2) Reaction Trendline

Flag Compression can also be measured using the Trendline as price momentum to continue the journey it is the sole trader for the measure to get a better price and with a combination of SR and SD, see example image below.

### 3. CP Flag (Type 3) Rising / Falling wedges

■ CP

### 3 Drives - 3 Taps

3 drives are simple and it is arguably one of the characteristics of compression it has a 3 wave or 3 taps into the Supply and Demand usually 3 drive is measured using the Trendline or view a zone that has the probability to drive the last of the 3 to get to SD zone.

To tap into force 3 / 3drive also usually will force CP to complete 3 drive.

■ CP

Figure above example is how the character or behavior tingkh occurrence of 3 drives to supply the ditandakan.jadi Area 3 drive is also one of the showcase to present our prices to make a decision to buy or sell a reason.

Buy a further example of the zone area of demand, below shows how the price up to 3 taps on FTR zone which already break SR

Moving on Entry 3 oder exit drive how we do we do? So refer to the picture below for the minimum TP (Take Profit) can you take the following minimum TP area.

Minimum Take Profit adalah pada Supply a

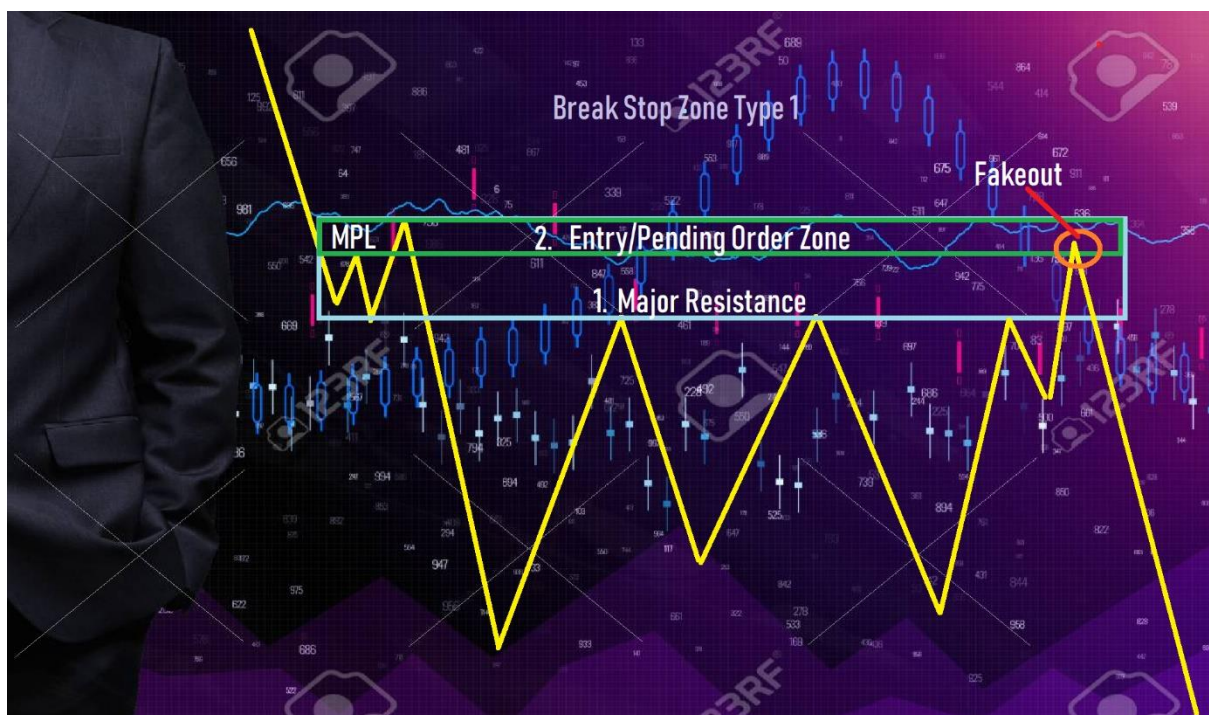

**Break And Stop Zone (BSZ)**

## Stop Break Zone (BSZ)

Break stop zone is Present Price ataupun Sequence manipulation (manipulation) by Big Trader. PA BSZ is good for us to make a decision on that market are berlaku. Untuk BSZ it is closely related to fakeout or another name is called False Breakout (Breakout fraud). Didalam RCM only 2 features hadamkan BSZ we need to make sure that the master -puan according to character and image in the sequence given.

### 1. Stop Break Zone (Type 1)

This diagram represents Break Stop Zone Type 1, it is easy to understand where 1 is the major resistance line, if you are gentlemen stumbled in the market exists resistance in parallel you must be careful to make a decision because of manipulation usually occurs in the Resistance or Support parallel (Barrier) ,

The above example is the entry of the Flag B (Swap Flag) it is also a setup for Swap Golden Flag by because there BSZ to MPL Limit Flag.

## Stop Break Zone (Type 2)

To BSZ Setup Type 2 it is good to make a decision always thinking of trading forex is risky ensure that you gentlemen are concerned about the risks before making a decision.

Distinctive character must exist within Stop Zone Break (Type 2) is first necessary to have bulls present / Approaching Compression or where to buy it instead. Both should have the zone Reaction Limit Flag in Diamond imagine, this character is also called the Golden Setup Limit Flag as RCM focuses Present prices Region / Zone Limit Flag.

The figure refers to the Stop Break Zone (Type 2) and the BSZ Type 2 are necessary to complement the character of the BSZ (Type 2).

# Reaction

Reaction adalah penutup kepada Present dan History  
Dimana selepas berlakunya Reaction ini maka lengkaplah Setup

## Quasimodo / Over And Under

Quasimodo is a beautiful structure, reaction rates and quality.

It provides a large signal that is ready to change the direction of the price. It is often used for price manipulation.

Pegerakan H, L, HH and LL-like pattern HnS Head n Shoulders.

This is Quasimodo Sell [H, L, HH, LL]

This is Quasimodo Buy [L, H, LL, HH]

How do they stop manipulating us by taking lost (SL) we see an example here.

Below are some examples of reactions Quasimodo

Pictured above is an example of how the occurrence Over and under, Quasimodo reaction is usually giving us the opportunity to save Pips berates position.

## the Diamond

Diamond is not much can elaborate on this diamond, but we note H, L, HH, LL and HH as if 3 drives the price but it forms either a reversal signal

atauponcontinuation. Lihat example diagram below for better understanding, and you need to make a diamond drills with looking at your chart and label.

Diagram showing diamond price formed on the stamp, refer to the next picture

Arising from the next setup price reaction zone to form a diamond, let's look at the next picture to see the situation this diamond

## The Can Can

Can Can existing pattern of a dancer it is defined by the setup sell, with the structure of the mast which is (Pole Up), then the price down and when this compression play a role, price will stir across the neckline (SR) or pound cap price as a decision point Oder. I'm not clear about this because it is very easy to understand, you can see the example below.

Here below are some examples of setups The Can - can for reference, this pattern can-can also always occur in the forex market, forex trading is high risk please make sure you think about the risk before profits.

Example H, L, HH, LL are formed as can-can

There can-can

## The Puzzle (Strategy) The Past, Present and Reaction

At last after we understand how or keseluruhan Foundation and the types of method in Supply and Demand. we will refer once again and combine all our understanding in greater detail Flag limit.

## Decision Point - DP (Selection To Put Order)

For this title according to the syllabus we have 8 Element or 8 types of selection DP but RCM wanted to make it easier so we just pick 3 out of 8 element such as the results negative for the classes that held it allows traders to spice ever can not make results.

Decision Point ataupon choosing to place orders Flag necessarily occur in Limit, Limit Flag is absolutely the best place to put the zone in order to baik.Cuma Limit Flag is still there or we lower the minimum DP of one large zone into smaller zones it can minimize our risk.

As usual, Max Forex is risky, please make the right choice to do any business transactions and this is a technical strategy, the trader trades care management alone.

### 1. Mouth Of Flag

Mouth Of Flag means we choose the overall High and Low Resistance and Support ataupon mapping the box, it is decision point Mouth Flag.

The risk to the overall trade zone Mouth Of The Flag is 28 Pips, based on the above picture we see still give a good reward to risk tersebut. bagaimana we want to minimize our risks? Understate risk is a good strategy, and there is also a risk in the event where we keburukkannya reduced mean zone entry that we select is a good strategy because it can reduce the risk of the position, but if the Order we do not trigger the reasons for wanting to reduce risk but after the price of admission to the Flag Limit and reaction occurs very well with our analysis but Order does not trigger means results for we do fail there.

## 2. Engulfing (Candle second engulf the first candle with Body)

Bullish Engulfing

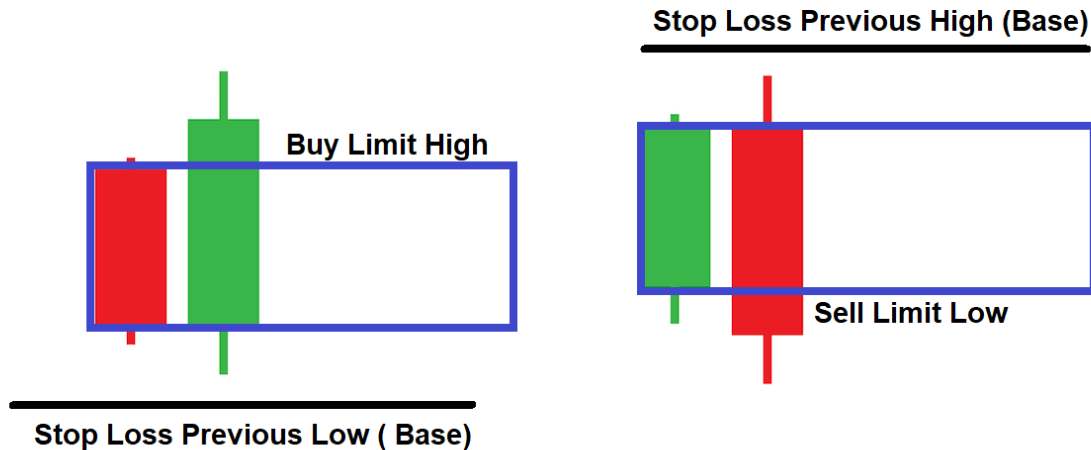

Bearish Engulfing

Example Engulfing Candlestick simple and easy to understand

### E Book V2 Random Cycle Malaysia

The figure refers High Limit Buy Order on Pending means that we High Box Body marks only take place if you use a broker who spread a large park to ensure Limit Buy at upon increased slightly over the spread of the High Cube tersebut. Untuk sell the same limit also only pending orders on the mapping is low, for there is no problem.

Sample images below after Engulfing downsized Decision Point, If see the same thing over and over in the market.

Figure 1 (Engulfing)

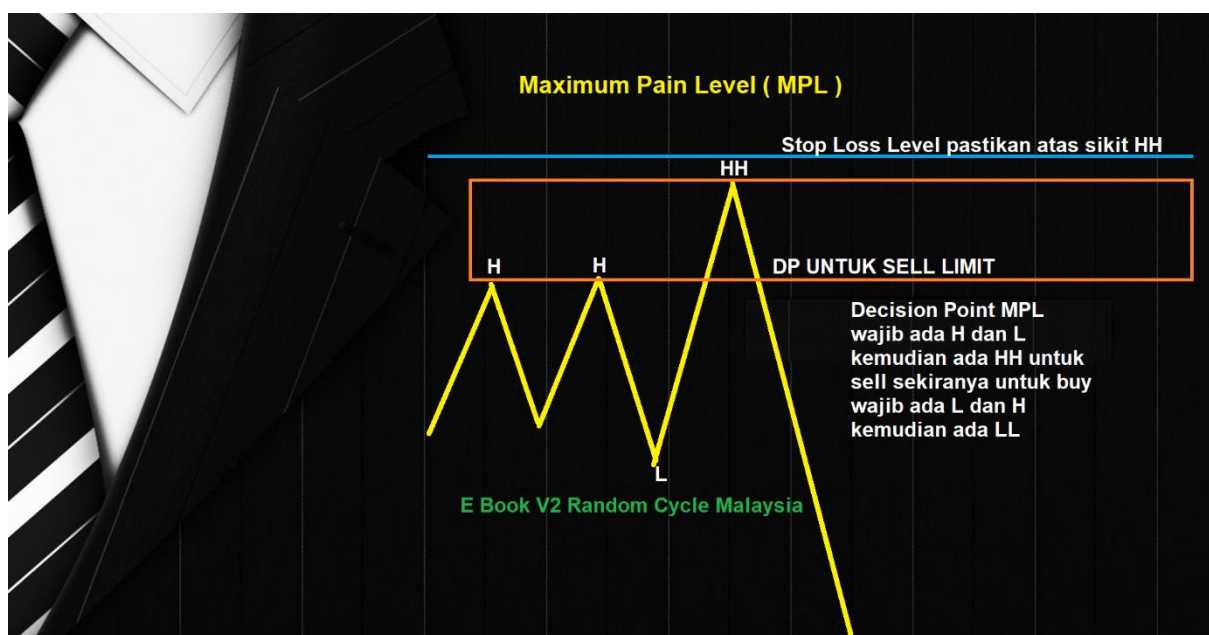

Figure 2 (Engulfing)

## Maximum Pain Level (MPL), Inner QM, Left Shoulder Kink (LSK)

Many of the names given to this part of the RCM but prefer MPL as a name that is easy and we just need to understand the situation and the character of the Decision Point we did Pending Order.

In a large zone / Mouth Of Flag Limit we will shrink again this zone by taking MPL as DP.

The image above shows the zone Limit Flag and Green Grid represent Max Pain Level (MPL)

## flag Limit

Basically Price moved between Base to base, known as dengue Flag Limit (Base Drop Drop) and RBR (Rally Rally Base), namely *Continuation Price*. *Flag limit is very important for traders who are trying to learn the Basic Technical Supply And Demand.* *Jom We see a continuation of this basic lesson about what appeals to traders.*

Referring Pictured above we see that *RBR (Base Rally Rally )* but try to look *barrier* Base is in line with the position then that we call *zone flag Limit* and he has not called *flag Limit* its zone is required *FTB (First Time Back)*

Ok now we see this diagram that price make First Time Back on Base Area RBR, so here is a zone confirm Flag Limit.

Merujuk this picture we can see the structure Major Support (Barrier) parallel to the Base Drop Drop Base.

We Mapping ataupun Marking Base being parallel to Support Major Barrier ataupun shows important area if we follow the trend semasa. Sebaiknya each area (zone) that we should be referring to mapping the current trends prevailing.

Now we see that Price has been successful taking orders on the limit of our flag zone mapping that we understand the First Time Back occurred in the zone it intends to confirm Base Limit Flag.

## Continuation Flag Limit

Continuation FL ataupun continue the trend with the limit flag is similar to what we see above for a description of how to understand the basic limit flag.

Understanding Basic Continuation Flag Limit when we read or hear the word Continuation clear that we understand we are follow the direction of the current market or market trends.

First we need to recognize Major Resistance / support as sir / madam know before this are described in this eBook is major resistance over the resistance.

Then look at the applicable base parallel to the resistance ataupun support ataupun Engulfed in line with the Resistance.

See the picture above Base Major Resistance parallel to it being important base for us to decide buy.

Step 1 Refer Major Resistance is important to ensure that engulfed base in this area.

Second Step Mail Base occurring in parallel with the break Major Resistance

Marking / Mapping Base is a place for us to make the decision to buy or sell.

Make sure we are mapping the entire base of the High and Low Base (Mouth of base)

Third Step decide to buy the Base Area of marked risk in Forex trading is a major factor for us to ensure that losses in every order / position to do.

## Golden Continuation Flag Limit Setup

Why RCM mengelarkan this setup is setup Mahal that is golden in the Continuation Flag Limit, this is because the setup Continuation Limit Flag is our supplement according to some SOPs, namely: -

Combined Approach / Present Price strokes heading into the zone area

1. We have a History / Past the flag zone limit
2. Approaching price to the zone should be Compression

As usual limit continuation flag shall have more than one ataupun Resistance Support, as shown above, it has more of a support and let us see a parallel with the major base of the support.

The second is that we will be mapping and marking zone is for us to decide to sell and understand the forex risk is high risk trades panstikan we choose a good decision to put the risk in each entry.

The result should Approaching / Present Price to Area Flag Limit with Compression, we can make the best decision if we follow the right steps to select ataupun buy sell if such a situation occurs.

## Resistance Support with Flag Limit (RS / FL)

Resistance Resistance Support Support what? Support Resistance is a familiar one needs to understand Resistance Support is very important because it limits its flag very familiar with the applicable Base in parallel with SR / RS (Barrier).

Getting to know about SR / RS

We look at the picture above shows the effect of Support Resistance also called significant Resistance. Significant Support and include the set of support and resistance in line with price support and resistance overlap.

Merujuk picture above we see that the first thing we need to be clear and understand the situation of the current trend where the market is now towards the bullish and rally Base Rally represents the zone flag limit for base takes place in parallel with the RS / SR also be important zone for traders because the base was successful show bullish direction after successful price upwards.

Now we see an example of that occurred in the chart where there is a structure we call ataupun significant support and resistance parallel to the base of a successful break on the price

The reaction rate after the successful return to the Area Base is important for us to make a decision toward the next market, the case is always repeated in the market but we are aware of this market is not static it is dynamic situation swapping but clearly our understanding of the important to make a choice buy and sell.

Step 1 we will see significant Support and Resistance parallel and we will refer to the applicable base in line with SR / RS. The area is why we choose? like know price to drive or move in a bearish trend and the current situation is clear.

As usual for the second step we will be marking / mapping important happens Base line and parallel to the SR / RS is

Price reaction after touching SR / RS Flag pulled limit? This is because we understand the causes and reasons why we chose atapon zone in accordance with the proper procedures.

### Golden Setup RS / SR Flag Limit

We see special setup RS / SR Limit Flag is when prices move closer to the significant SR / RS in parallel with the existence of base line is significant.

The Base mapping as usual, to decide buy / sell and ensure that the risks of forex trading is high risk, please confirm your decision in line with the risk that you choose.

What is a Golden Set, Golden setup is RCM degree kesenambungan Past / History, Present ataupun Approaching price with 3 situation of price rise to the marking area we ataupun mapping: -

- i) 3 Drive
- ii) Compression (CP)
- iii) Stop Break Zone (BSZ)
- iv) Reaction as Diamond H, L, HH, LL, HH @ L, H, LL, HH, LL

The combined results of the Flag limit, approaching the price to Flag Limit Base with 3 Drive and compression.

If we want to make sure that our decisions here in Character as we learn through this eBook, ensure the existence of SR / RS ataupun significant support and resistance ,usually we hear the words or language Look to the left of that is past history ataupun see what there is to the left to make a decision.

Referring to this picture we see the existence of the Resistance and support RS occurrence of overlap Base Drop Drop at upon line parallel to the line RS.

The second step mapping Flag limit / Important Base is going to calculate the risk of each position to be opened by setup is going to happen, any probability can happen in forex, forex trading is high risk.

The next diagram we see the potential for Stop Break Zone (BSZ) because there is this parallel Resistance book by referring to the setup BSZ and FO (fakeout)

And third, we see a continuation of the successful setup golden with the BSZ (Break Stop Zone) and Diamond as a reaction against our zone mapping, complete the setup Golden SR / RS Flag Limit.

The same setup is always repeated, thus to master Flag Limit exercise it is not absolutely necessary to read notes, Ebook and Video. Kita see the next situation.

First of all we see or do labels on the market should find support major character ataupun SSR resistance and major overlap here.

After that we will make the zone ataupun Flag Limit Base Areas marked for Decision Point (DP) our position, do not trade Forex is a high risk that you suggest any position to be opened by this SOP correctly.

Then we will see what the Present or Reaction Engineering for kekawasan is here we see the price seemed to form Character Diamond.

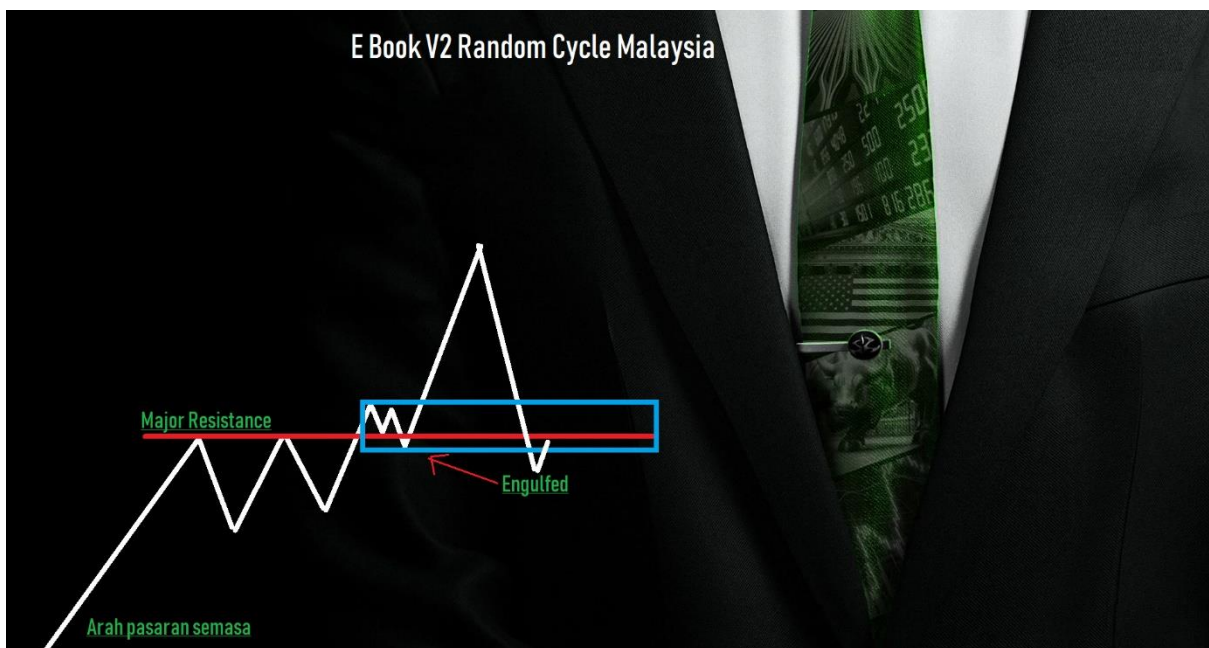

The results of our analysis, inshaAllah character over and over again in the market to make sure we make the decision wisely.

## Swap Changing Flag Limit

As previously comprehension, word swap refers to Change

Change here means Continuation Flag position limit has been turned ataupun been canceled, it is equal to the swap base that we understand this title before the occurrence Just swap base important features for us to know in depth according to the characteristics or character swap.

Refer to the picture above "Engulfed" means the price successful pass with a solid base body is placed arrow so that in this situation it is the same as the base Simply swap characteristics FL zone or base area was very detailed and important to us paham.cuba we see the characteristics on the picture

- 1.wujudnya Major Resistance
- 2.selari with the existence of major Resistance base that drives prices up
3. Then after the price down to the base of the price / candle successful beyond the base (engulfed).

### Flag Swap Learning Basic Character Limit

The first situation we now see the continuation flag position limit

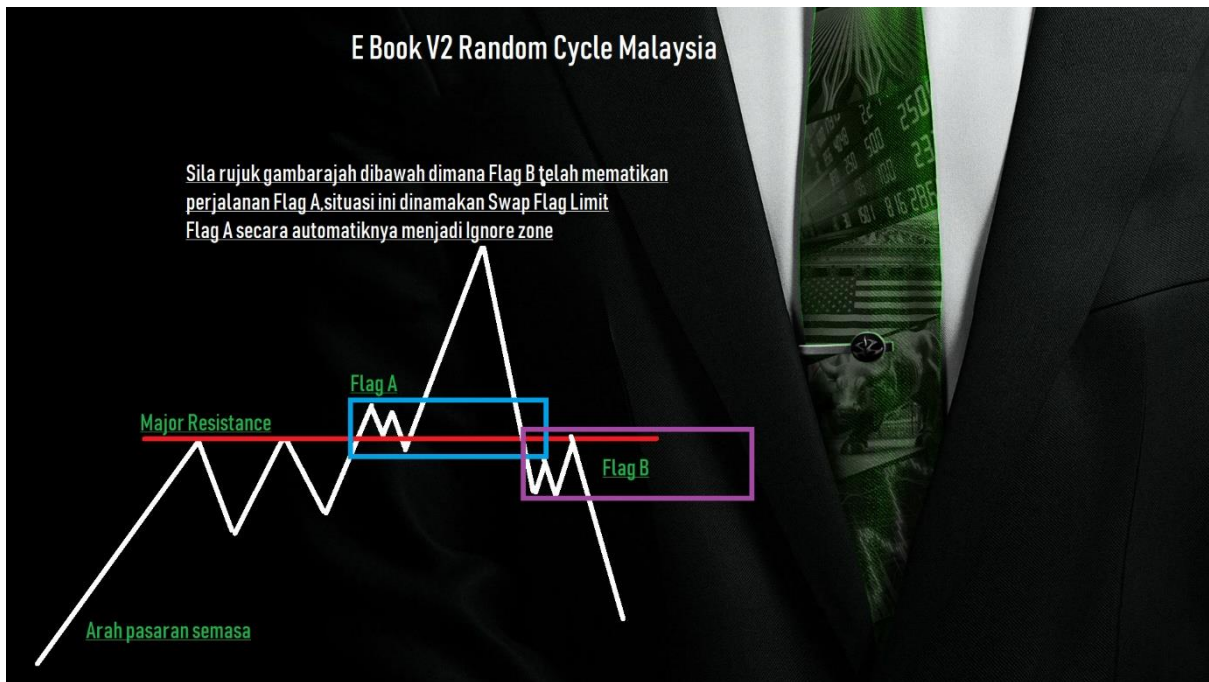

The situation has been turned RBR ataupun important base price surpassed the previous successful.

The third situation occurs where the limit flag is a swap between DBR (Base Drop Drop) and RBR (Base Rally Rally) this image explained that dengue has killed RBR RBR sebelumnya.bermaksud now no longer important for us it to ignore base ataupun base that needs to be ignored and now DHF has become a very important zone swap flag important base limit.

In RCM we have explained more easily so that all understand further the exchange of base to base this limit is called the flag B Flag Flag A deadly journey

,please refer to the image below.

So no need to Flag B FTB (First Time Back) because B has Engulfed Flag Flag A flag is then automatically Base B is now Limit Flag.

For this picture is applicable on TimeFrame H1 and when observed it quite vague, so if we need to setup a bit sketchy switch to smaller TimeFrame to see more clearly Setup.

When changing to a smaller TF examples in this image is Time M30 (30 Minutes)

We can see in this zone H1 Flag B (Base) there are still structural Flag A and Flag B (Swap Flag)

Present situation of BSZ completing the above setup makes a golden setup Flag Swap

SOP / Swap Flag same setup and repeatedly occur in the market

Present price point toward Compression History Area and we remained with the decision on the Flag Area to place Pending Limit Order (PO)

And finally in the picture above prices across Flag B and so on according to SOP swap Flag.

## Flag Swipe

Swipe Flag is Hidden Decision Point potential for the occurrence of "Spike" Spike means whipsaw price to Area Hidden DP, Hidden DP not mean Hidden base but in fact base that is before the Continuation Flag Limit and Swap Flag, refer to the image below to see the character Swipe Flag ,

If we look at the picture above, there are some things in which there are significant / Major Support and price successful breakout Sign Support and we can see before the breakout there is a base called Swipe Flag, For this situation Be Present happen before deciding to put any position.

Pictured above example choose Base Price before Breakout Significant Support.

See next picture if any, that the BSZ present character and it makes Diamond Reaction SOP Flag Swipe Ni more attractive so the conclusion RCM emphasis Present as No. 1 when beranalisa.

# Abbreviations

BE - Break even  
BEFL - Bearflag  
BO - Breakout  
BSZ - Breakout and Stop Loss Zone  
BUFL - Bullflag  
CP - Compression  
CPLQ - CP followed by Liquidity  
DBD - Drop base drop, descending pole flag pole  
DBR - Drop base rally  
DBT - Double top  
D1 - Daily  
DD - Drawdown  
DM - Diamond  
DMA - Direct Market Access  
DP - Decision Point  
FL - Flag Limit  
FL - As Suffix - Flag / Consolidation  
FO - Fakeout  
FOF - Free Order Flow  
FTA - First trouble area  
FTB - First time back. Followed by 2TB, 3TB etc.  
FTR - Failure to return. Also Hook, Finger  
HH - Higher High  
HL - Higher Low  
HNS - Head and shoulders  
HTF - Higher timeframe  
HW - Homework  
iQM / IQM - Ignored Quasimodo  
IT - Institutional Trader (or banks and other financial organisations)  
LFL - Lower FL  
LH - Lower High  
LL - Lower Low  
LS - Left Shoulder  
LSK - Left Shoulder Kink  
LTF - Lower timeframe

M1 - 1 minute  
M2 and so on  
MN - Monthly  
MPL - Maximum Pain Limit (the last set of orders, or the maximum where price can travel)  
ORFL - Orderflow  
PA - Price action  
PAZ - PA Zone  
PCP - Pre-Compression  
PIE - Price Is Everything thread  
PO - Pending Order  
RBD - Rally base drop  
RT - Retrace/Retracement  
SL - Stoploss  
SR - Support/resistance  
TG - Target  
TP - Take profit  
TPP - Take partial profit  
TT - Touch trade  
UFL - Upper FL  
W1 - Weekly

## Closing

Syukur Alhamdulillah, finally ready also Ebook V2 of RCM, with the designing according to the syllabus of basic until golden Entry successful RCM also provides Supply And Demand eBook covering Flag limit as the main focus.

If Folks have an understanding of our Technical Support and Resistance sure you all can easily understand Technical SOPs written in this book. And if you already have the basic (Basic) Supply And Demand mudah.Kesimpulan it will be much that we can not dismantle at the end of this book was published Limit Flag is the main thing if Mr. gentlemen interested in studying Technical Supply & Demand as an electoral base limit Flag the right and if you follow the steps that we had it exactly how a trader SR and SD beranalisa.

Before that I, the author of this book capriche Ismail apologize for writing that I could not do this on my writing Gredkankan Excellent category, but for me it is enough to make the ladies and gentlemen understand what you want to say here RCM.

Finally I want to thank all who were willing to convey to subscribe Ebook V2 of Random Cycle Malaysia "No Hero and No Master and Respect Each Other.

As of January 2019 Mr. Mrs. Website RCM snag on certain issues so please Follow Facebook Page RCM to Roadtour during 2019 and 2020 and the RCM will provide Education occurred or continued.

So if there is a shortage in the ebook v2 I, the author apologizes and gentlemen hosts who bought this book can he propose to me in WhatsApp for buyers and related improvements on V2 EBook issue.Thank Love.
